                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             (see also O6475) from a heterogenic virus so the the NAMBHY protein may be expressed by a transformed insect ceni. The expressed protein may be used as an antigen in the generation of anti-NAMBHY attributes. These authorises may be used in a hepatitic of anti-NAMBHY stibodies. PT DAN coding for portine interleukin 1-beta - and new recombinant protection interleukin 1-beta useful as growth factor and mannestimalists.

PT DAN coding for portine interleukin 1-beta on the recombinant protection interleukin 1-beta useful as growth factor and protection interleukin-1 beta was contamined (07147). The mature portine in 1-beta polypeptide is useful contamined (07147). The mature portine in 1-beta polypeptide is useful contamined (07147). The mature portine in 1-beta polypeptide is useful contamined (071477). The mature portine in 1-beta polypeptide is useful contamined in 1-beta polypeptide is useful contamined in 1-beta polypeptide is useful contamined in 1-beta was cutoned and immunostimularity esp. vs. as vaccine adularity in 1-beta vs. as an immunostimularity of the polyperide of the polyp                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      206141873-A.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Tue Nov 17 08:55:26 1998

gtWES lambda B DNA from total DNA of H9 cells producing HIV-1 (NN) This close was designated Lambda MR-PHI, it was subjoined in Milmph and Milmpile and the DNA sequence of the entire close was obtained. The four 'OTERS' in the sequence represent bases which are profess was effected from this equence the present of the enverse profess was deduced from this equence and the env gene was bossible. That recombinant production of the env proven was consistent and the temperature of the env present was present the profess of the env proven was present the env present present the e 888888888

There Previously identified as MORF-20092, the
encoded protein shows 45.96 percentage
for it from B. subtilis*
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       "Label" MG024

individually tagged normalized libraries constructed from 8, 12 and 18 day embryo. The tags is a string of 3-5 nucleotides present between the Not 1 site and the oligo-off rack which allows definitionation of the library of crisps of close within the mixture. The subtracted of library (UT-R-12) was constructed as follows: FOR amplified cDNA inserts from a pool of UT-R-20 clones from which 3 '827s had benederived as leads as driver in a high-diffraction with the UT-R-20 library in the form of single-extraded curcles. The remaining single-stranded circles (abbracted library) was purified by hydroxypatite column chromotography, converted to Mydroxypatite column chromotography, converted to bacteria (Life Tehnologies) to generate the UT-R-12 library. This procedure has been previously described (somation, Lennon and Soares, Genome Research 6: 791-806, 1898).

Precombinant mammalian interleukin-6 receptor - used for screening interleukin-8 indiging antegorists, used to treat inflammation bisicaire 743 7 71pp English.

Disclosure 743 7 71pp English.

Rabbit Maph afflictly 10- receptor game was isolated from tabbit performed interruphils and used as source 50 polyth+ RMs to complete a reacher neatrophils and used as source 50 polyth+ RMs to complete a reacher neatrophils. This probe was designed based on the complete a receptor in this probe was designed based and the complete forcide (500015). This probe was designed based and the complete force the second transmembrane demain of Correction Coupled receptors. After terriary screening, six pleques were complete force the second transmembrane decined from the FDR close demonstrates that it belongs to the family of Corporation coupled receptors. The deduced protein sequence indicates seven putcher framamed segments. A human complete a seven putcher framamed segments. A human complete a served SDS to the rabbit PRI and with a protein decides a seven patch of the rabbit PRI and a propose seven solides. After terriary screening and a segments. A number of the about the rabbit in 9 probe seven solides. After terriary screening and a sequence (500015) is a sequence (500015). The sabbit PRI and of the rabbit in 9 probe sequence (500015) is a sequence (500015).

HIGH SPHINT IMPELICATALS RECEPTOR B (IL-SR B) (CKCR-2) (FRAGMERT)
GORILLA CORILLA (LOWIAND CORILLA).
GORILLA CORILLA CORILLA (LOWIAND CORILLA).
FORMATION, PRIMATES.

ACHAREA V. GONZAL, SETIEN P., GONZALEZ S., GONZALEZ-ROCES S., LOPEZ-LARREA C.: INCUMCENETICS 43:251-257(1995). II- FONCTION: RECEPTOR TO INTERLEGATIN-8, WHICH IS A POWERPUL

SECURICE FROM N.A.,

TATSOFC-CREASAL, CORTEX;

PATASOFC-CREASAL, CORTEX;

PATASOFCH N.P., OSTINGI N.A., BROWN D.R., MURTNOGH N.P.;

SUBMITTED (NOV-1995) TO DEMI_CREANIATIONED ANTA BARRA

- PROSTON: MATHERITS NUMBERSHIPTER RELEASE BY REDUCTING CALCIUM

TON CURRENTS AND INCREASING POTASSIUM ION CONDUCTANCE. RECEPTOR

SIS SCROFA (PIG). BURARTOTA, HETAKOA, CHORDATA, VERTEBRATA; TETRAPODA; MAMMALIA; ETHERIA, ARTIODACITIA.

ELULIAR LOCATION: INTEGRAL MEMBRANE PROTEIN. MARITT: ELECAGES TO PAMILE 1 OF G-PROTEIN COUPLED RECEPTORS, 1848; 51553057; -.

PROTEIN RECEPTOR; 1. BCEPTOR; TRANSMEMBRANE; GLYCOPROTEIN POPROTEIN; PALMITATE.

RESULT.
